

Moving to Mars

Have you heard of the Apophis asteroid? It will hit Earth in 2036 (4 years from now). NASA (The National Aeronautics and Space Administration) told all humans to move to Mars because the Earth will get destroyed. It takes about four and a half months to get to Mars.

The year is 2032. I am on a spaceship called Movers 51. Its destination is Mars. I am with my family and 50 other people. My family did not wanna go but some people do. I had to leave my pet fish home. I was sad. The spaceship's outside is boring because it is black with white spots. The inside has a cafe, 5 bathrooms, 12 modules, and 54 seats.

A few friends have already moved to Mars and they have told me about living there. The ground's red, The "houses" on Mars are made out of Mars stones, there are mountains, there is no ocean. What they do for fun on Mars is jump because of its low gravity. We will share a house.

I am looking forward to meeting Martians. They look like tall octopi but have five arms we call the martians Pentapi. The Pentapi live with the humans. I will feel better about moving to Mars once I get there!
